

DONWLOADS MODULE

This module allows you to simply turn any subfolder of /images into a downloadable folder.

Simply select the folder, upload your documents, tweak some settings and you are done.

Features:

- Being a module allows your downloads to be ACL based. You can publish the module and set rights to it;
- Select a folder, and make its contents downloadable;
- Publish more than 1 instance on the same page, making more folders downloadable;
- Set options such as column names, colors, and icons (a folder for PDF files: select a PDF icon, a folder for DOC files, select a DOC icon, etc);
- Optionally load font awesome if not loaded already;
- Show filenames;
- Show file sizes;

Very handy and easy to use!
